

Conferencing on Pulse

Event space management
made easy

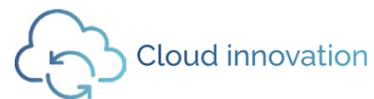

Meet Conferencing: the cloud-based portal that makes conference, meeting and event space administration faster and easier for you - and supports seamless customer experiences.

Event space management made easy

Conferencing is a cloud-based management and administration tool for your hospitality, meeting and event spaces. A core part of the Kinetic Pulse suite of cloud solutions, it unshackles your management from on-premise computers, and equips your event managers and staff with real-time, up-to-date information, whenever and wherever you're working.

With the agility that Conferencing provides, you can deliver seamless experiences to your customers, make management faster and easier, and maximise the potential of coordinated data across all your space management platforms.

Cloud innovation

Take advantage of the flexibility, security and integration capabilities of the cloud.

Single platform

Bring every element of your conferencing and event management together in one place.

Anytime, anywhere access

Make your event managers more agile with always-on access to Conferencing on any device, including mobile phones and tablets.

Certified accessible

Conferencing meets WCAG 2.1 standards for accessibility, so all staff can use the system effectively.

Fully scalable

Conferencing can incorporate a limitless number of rooms, spaces and sites, making it suitable for estates big and small.

Configurable

Many functions can be adjusted and customised to perfectly complement your specific needs and characteristics.

Synchronised data

Customer Hub meets WCAG 2.1 AA standards for web accessibility.

Powerful reporting

Uncover potential cost, resource and admin efficiencies through extensive and configurable reports.

Simplified booking

Support a seamless, end-to-end booking process, from initial enquiry to invoice and payment.

A constant approach to development

Conferencing is a new addition to the Kinetic Pulse ecosystem, and as such, we're developing and adding new features all the time. Over the course of 2022, Conferencing will gradually be equipped with the following functionality:

Customer Management

The ability to store and manage contact and company information, maintain interaction history, capture and create new leads, and manage conversions and turn-downs.

Planners and diaries

View all provisional and confirmed bookings in one central place, understand gaps in diaries, and maximise occupation of resources like meeting rooms, bedrooms and catering.

Quotes and contracts

Automatic generation of quotes, based on booked resources, along with generation and sending of contracts to clients.

Deposits and invoices

Receive deposit payments for events and generate invoices to be paid.

Reporting

Business-wide reporting, supported by a user-friendly report builder and automated distribution capabilities.

Kinetic Pulse: enabling easier operations in the cloud

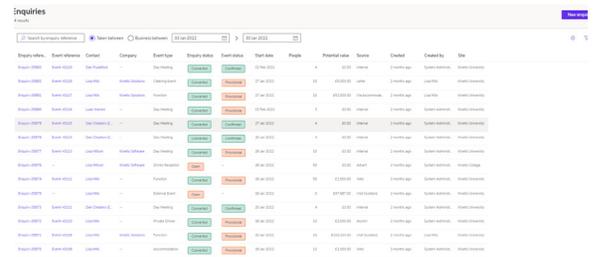

Conferencing is one of a number of products that run on Pulse: our new cloud platform underpinned by the power, security and dependability of Amazon Web Services.

Conferencing is one of a number of products that run on Pulse: our new cloud platform underpinned by the power, security and dependability of Amazon Web Services.

Our Customer Hub solution on Pulse, which cloud-enables and evolves self-serve space booking for your internal and external customers, is also undergoing a continuous process of enhancement. Going a step further and adopting Conferencing and Customer Hub brings together customer-facing innovation and easy administration into a single, inter-connected ecosystem.

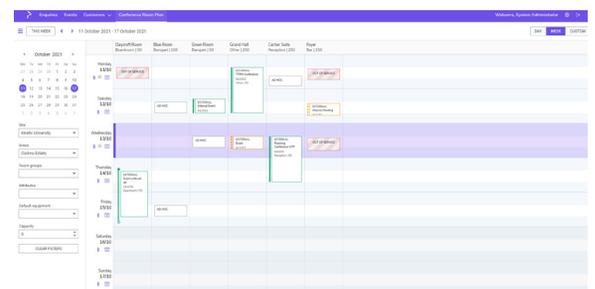

Pulse also connects with your existing Kx database, meaning that your existing system can run concurrently with your new cloud solutions, with data automatically synchronized between each. Only with this combination of cloud technologies can you cut the red tape out of bookings and space management, and reduce your demand on admin staff and IT.

What's more, it's the best way to ensure that all your functionality is accessible to every user and every administration, wherever and whenever they're working, and whatever device they're using.
