Clearer, faster, more detailed inspections made easy

Meet KxInspections: Our simple, user-friendly application for student room and item inspections. Run through pre-configured checklists, take photos of damaged items, automatically generate reports attached to profiles in KxStudent, and quickly create charges for damage.

How it works:

Fast accurate inspections

Pre-configured inventory lists and app-based inspection processes which students can sign make it quicker than ever for staff to check items and rooms.

Connect with student profiles

Inspection reports can automatically link to profiles within KxStudent, including photos of condition, ensuring clear lines of responsibility over time in the event of damage.

Forcast inventory changes

Assess and log item conditions, compare them to previous inspection reports, and make accurate predictions on when replacements will be necessary.

Integrated charging options

Any damage incurring costs can be logged in inspections, from which charges can be created for individual or multiple students.

How it helps you

Automate communications

Students automatically get notifications about inspection results or damaged items, streamlining the process and saving staff even more time.

Improve staff productivity

With faster inspections, no paperwork and no need for duplicating information, your team can get more done in their days.

Plan investment with confidence

Visibility over future inventory requirements allows you to make accurate financial forecasts and budget for subsequent years more reliably.

Easy data storage and access

All inspection data is automatically stored for future access, giving you a reliable digital 'paper trail' of room condition over time.

Make inspections greener (paperless)

By removing paper from your inspection processes, you can reduce the environmental impact and contribute to more sustainable operations
