

Information at your fingertips

Meet KxMobile: KxMobile puts all the functionality of KxConferencing and KxResidential space management in the palms of your staff members' hands. It's an app for iOS and Android that makes check-ins, housekeeping and maximising occupancy easier, faster and based on accurate, real-time data.

How it works:

Anywhere, anytime access

Get a comprehensive, up-to-date view of every bedroom and conferencing room, whenever and wherever a staff member is at the time.

Generate revenue on the spot

By checking availability in real time, staff can immediately complete transactions with customers, improving opportunities to drive more sales.

Update, information instantly

Digital registration and room statuses can be updated on the go, meaning every staff member can get real-time access to accurate information.

Improve customer experiences

Give your guests faster check-ins and instant answers to their queries, wherever you are, so that their visit is smooth and hassle-free.

How it helps you

Remove registration headaches

Check guests into their conference room or bedroom at the point of entry using a mobile device, cutting queues at reception and speeding up the check-in experience.

Streamline processes

Easily track, identify and report on occupancy rates, no-shows and wider sales opportunities, and connect with your back-office system for seamless, inter-connected management.

Boost efficiency and productivity

On-the-spot access to data helps your team view conference plans on the go, utilise their time better and devote more time to customer-facing service.

Efficient, real-time collaboration

Instant updates of room statuses improves communication between departments, and housekeeping teams know they can get to work as soon as a room is vacated.

Configure data access

Set appropriate user permissions, including temporary access when needed, to strike the right balance between the accessibility and security of data.

Reduce paper use

Digital registration at the point of entry or check-in saves time, and minimises the environmental impact caused by paper contracts and documentation.
