

Student Information at your fingertips

Meet KxMobile: KxMobile puts all the student management functionality of KxStudent in the palms of your staff members' hands. It's an app for iOS and Android that makes check-ins, housekeeping and monitoring occupancy easier, faster and based on accurate, real-time data.

How it works:

Anywhere, anytime data access

Get a comprehensive, up-to-date view of every room, whenever and wherever a staff member is at the time.

Manage rooms remotely

Check whether rooms are vacant, as well as their housekeeping status, without having to call the building office or knock on doors.

Real-time information

Digital room lists and statuses can be updated on the go, meaning every staff member can get real-time access to accurate information on every bedroom.

Improve customer experiences

Give students faster check-ins and instant answers to their queries, wherever you are, so that their experience is smooth and hassle-free from day one.

How it helps you

Remove check-in headaches

Check students into their rooms in an instant using a mobile device, cutting check-in times in busy periods at the start and the end of the academic year.

Streamline processes

On-the-spot access to data helps your team view room statuses on the go, utilise their time better and devote more time to deliver great student experiences.

Check student details

Student photos can be displayed on individual profiles along with notes on interaction, so staff can be sure they're dealing with the right person in the right way.

Configure data access

With appropriate user permissions, including temporary access when needed, you can easily strike and maintain the right balance between the accessibility and security of data.

Reduce paper use

Digital check-in lists save time, and minimise the environmental impact caused by paper documentation.
