Kinetic

KX STUDENT

Connect every dot of the student journey

Meet KxStudent: The platform from which you can seamlessly manage the successful journey of every student. Bring a wide range of functions together in one place, including integrations with other Kx products, and make student management fast, easy and inter-connected.

How it works:

Centralised platform

Combine multiple functions and student services in one user-friendly platform, and integrate with other Kinetic solutions for expanded functionality.

Complete journey tracking

Keep tabs on every student's journey from beginning to end, from application to graduation, and help them get the service they expect and the support they need.

Automated reporting

Schedule and pull through automated reports to understand key trends within the student lifecycle, and make data-driven decisions for better results in the future.

Efficient accommodation management

It's never been easier to look after every aspect of student accommodation. Oversee payments, invoices, occupancy, allocations and usage rates - all in one place.

Student accommodation, wellbeing and event management software

How it helps you

Boost student experiences

Giving students a range of features within one-user friendly platform, and keeping each student's information consistently up-to-date, ensures they get the most positive experience possible.

Reduce your admin burden

Quickly deal with common queries through mass emails, and automate the creation of every student contact, to cut the amount of day-to-day administration needed.

Improved productivity and communcation

By easily managing arrivals and departures, and by allocating bedrooms to students in bulk, you can free up time for your staff, and help them communicate with students better through fully audited correspondence.

Flexible integration

Put KxStudent at the core of a flexible ecosystem at your facility, connecting with registry, financials, door acces, Student Web for student applications and much more.

Data consistency

An integrated ecosystem means that every solution uses the same comprehensive, up-to-date information, cutting the risk of data duplication and causing administrative issues.
